POST SHOW REPORT

Inaugural Session

Enabling Energy Citizenship

This March, Enersider launched its marquee flagship, the Annual Business Conclave – Energy Dialogues (ABC), on the 23rd at Le Méridien, New Delhi. The inaugural panel explored energy citizenship, with Vibha Dhawan, Director General, TERI, highlighting rural agricultural initiatives; Mohit Bhargava, UC Berkeley, outlining India's renewable and green hydrogen landscape; Abhishek Ranjan, BSES Rajdhani, discussing discoms and prosumers; and Erik Solheim emphasizing India's solar potential. The event also saw the launch of Enersider's Special Edition and our newest venture - Enersider Infra – a publication focusing on the infrastructure landscape of India.

CLIMATE ACTION DIALOGUES

In Association With

CRF

'Decarbonisation without Disruptions' - This theme anchored the **Climate Action Dialogues** presented in association with Chintan Research Foundation. The session underscored that India's transition must move beyond a simple fossil-to-renewable shift toward a broader systems transformation—from molecules to electrons across sectors. While renewable capacity is scaling rapidly, grid and transmission constraints remain critical bottlenecks. Speakers emphasised that a balanced approach where conventional and clean energy coexist will be essential, alongside stronger systems, smarter planning, and more secure, de-risked investments.

NATURAL GAS DIALOGUES

In Association With

The **Natural Gas Dialogues**, in association with the Natural Gas Society, brought together six presentations that offered a clear view of how India's gas ecosystem is evolving. The session highlighted the steady expansion of city gas networks, supported by growing LNG integration and rising demand across sectors. Small-scale LNG was discussed as a practical solution for improving access and reducing emissions. Presentations also focused on the increasing use of digital tools—such as AI and integrated data systems—to enhance efficiency and operations. Overall, the dialogue reinforced the importance of energy security and policy support in scaling natural gas as a transition fuel.

GREEN HYDROGEN DIALOGUES

In Association With

GH2 India

The **Green Hydrogen Dialogues**, in association with GH2 India, opened with the pre-release of the GH2 India Digest and a market outlook address by Nishaanth Balashanmugam, Director, GH2 India, who also moderated the panel. The session focused on turning policy intent into real, bankable projects. The discussion highlighted the need to secure demand, strengthen supporting infrastructure, and establish clear certification standards. Panellists also emphasised the importance of unlocking capital and reducing investment risks, positioning green hydrogen as a key driver of decarbonisation, industrial growth, and long-term energy security.

NET ZERO ENERGY DIALOGUES

In Association With

NETRA
Net-zero Energy Transition Association

India's path to net zero will rely on scaling cleantech manufacturing, strengthening local supply chains, and accelerating adoption on the ground. At the **Net Zero Dialogues**, in association with NETRA, the conversation focused on building an ecosystem that can deliver at scale. This includes creating bankable projects, ensuring quality standards, and developing a skilled workforce. Panellists also highlighted the need for strategic investment, closer industry–academia collaboration, and broader participation—key steps in positioning India as a global hub for practical, deployable net-zero solutions.

BIOENERGY DIALOGUES

In Association With

iba Indian Biogas Association

The **Bioenergy Dialogues**, held in association with Indian Biogas Association, brought together diverse perspectives through a fireside chat between Col Rohit Dev and Gaurav Kedia. The conversation explored the geopolitical relevance and granular realities of scaling bioenergy in India. A special presentation by Tanuj Sharma highlighted the wide potential of biofuels—from waste-based feedstocks to growing blending mandates. The session emphasised bioenergy's role in strengthening energy security, supporting rural economies, and the need for stronger systems to scale effectively.
